

HI !

Danny Putra Pertama

Mobile Developer

Work Experience

throughout my career as a Mobile Developer, I have gained extensive experience in creating a wide range of applications using technologies like Flutter, Flutterflow, Kotlin, and React Native. My professional journey began with developing event management applications for Digital Amoeba and PT Barrans Global Mandiri, where I honed my skills in building intuitive user interfaces and managing event related features.

Since then, I have built comprehensive HR solutions for both PT Swamedia Informatika and Telkom Indonesia, creating tools to streamline various processes. My experience also extends to freelance work on Upwork, where I've continued to develop HR applications alongside projects for mental health, showcasing my versatility and adaptability. Most recently, I've taken on the development of the Ferizy B2C application at PT ASDP, a large scale project that further expands my expertise into consumer facing platforms. This diverse background highlights my ability to deliver high quality applications across different domains and my dedication to continuous learning.

Projects

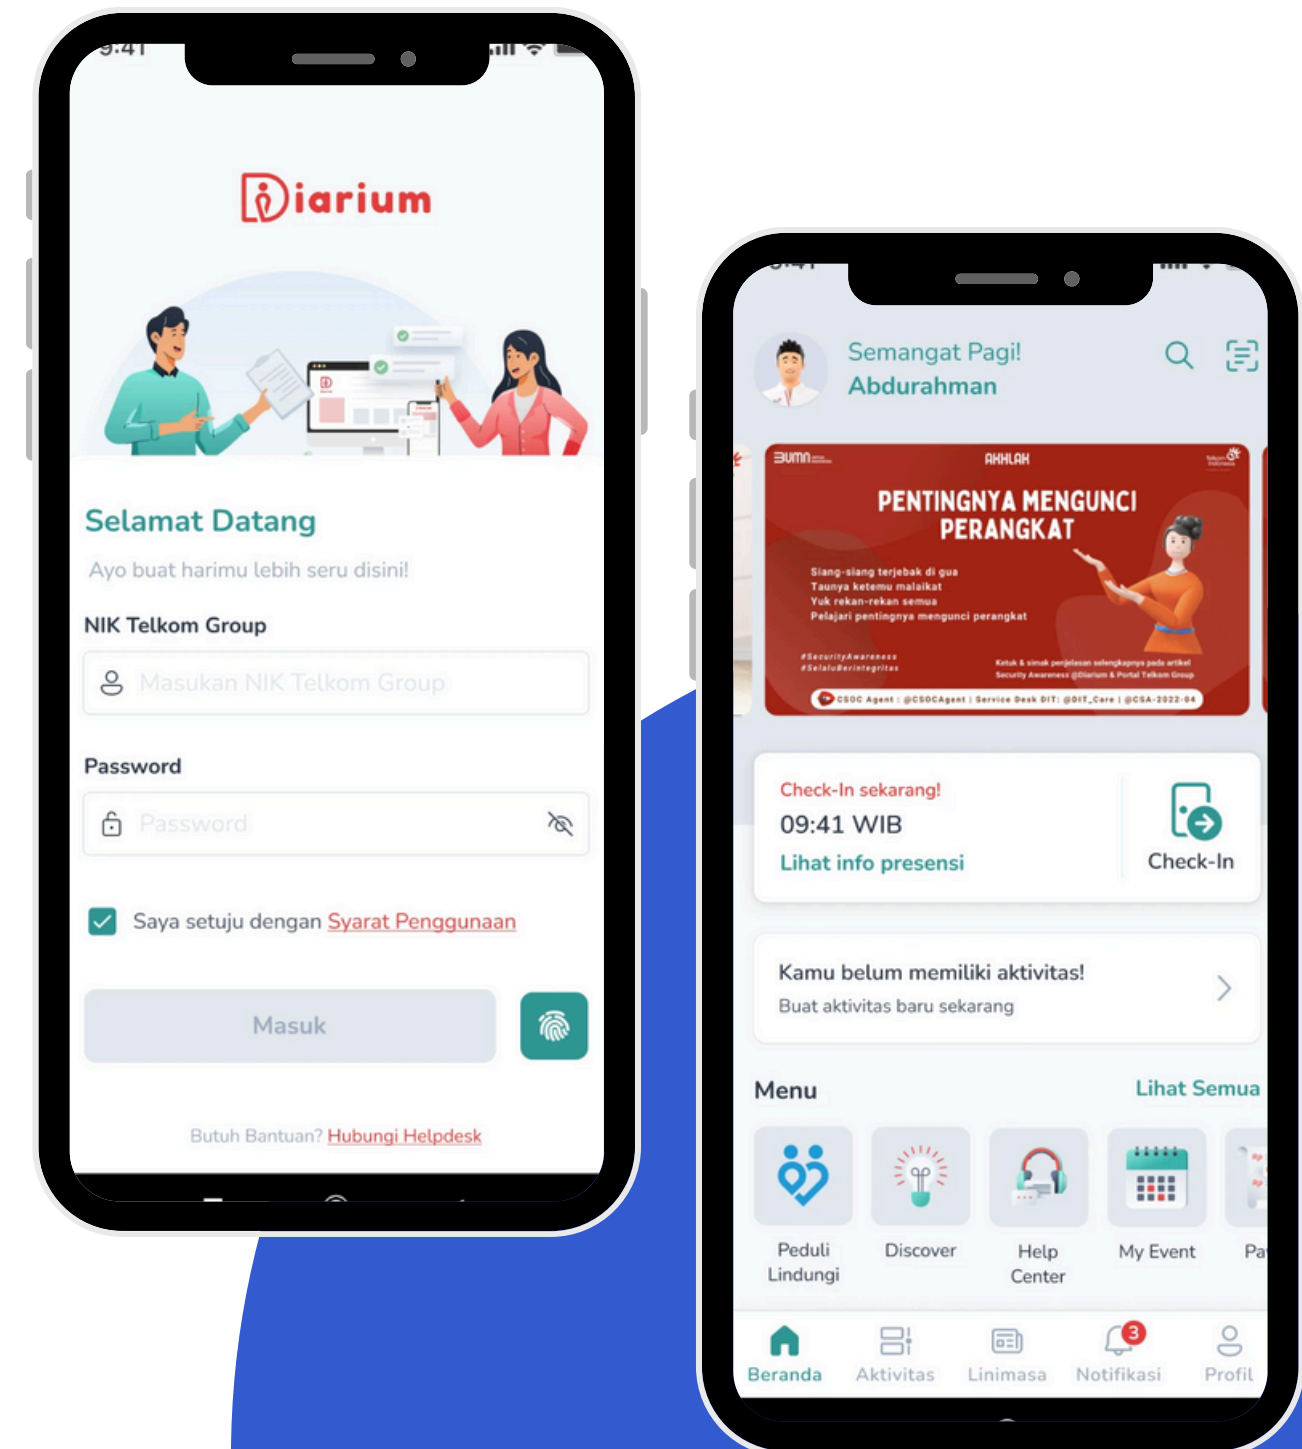

Here are some of the application projects I have worked on. I have experience on HR applications, mental health app, app that include transactions, I have also developed several applications outside of this domain. These projects showcase my versatility and ability to adapt to different technologies and industries. From mobile applications built with Flutter, Flutterflow, React native to native apps developed using languages like Swift and Kotlin, I continually seek to expand my skill set and tackle diverse challenges.

Diarium

Diarium is a Human Resource Information System (HRIS) application designed to streamline HR management and employee self-service processes in large organizations.

As a Mobile Developer for Diarium, my contributions included:

- **Developing Core Features:** Implemented and optimized key functionalities such as attendance tracking, payroll management, and leave requests using Flutter to ensure a seamless and responsive user experience.
- **API Integration:** Collaborated with backend teams to ensure accurate data synchronization between the app and servers, including handling real-time data for attendance needs.
- **Performance Optimization:** Identified and resolved performance bottlenecks to improve loading times and enhance app stability across Android and iOS platforms.
- **Team Collaboration:** Worked closely with designers, QA engineers, and backend developers to ensure that all feature updates met quality standards and user expectations.
- **Technical Problem-Solving:** Addressed complex challenges such as implementing secure authentication mechanisms and managing sensitive data in compliance with security standards.

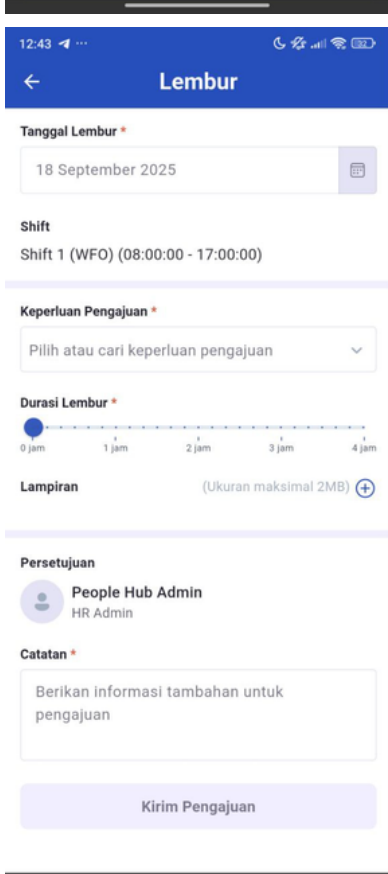

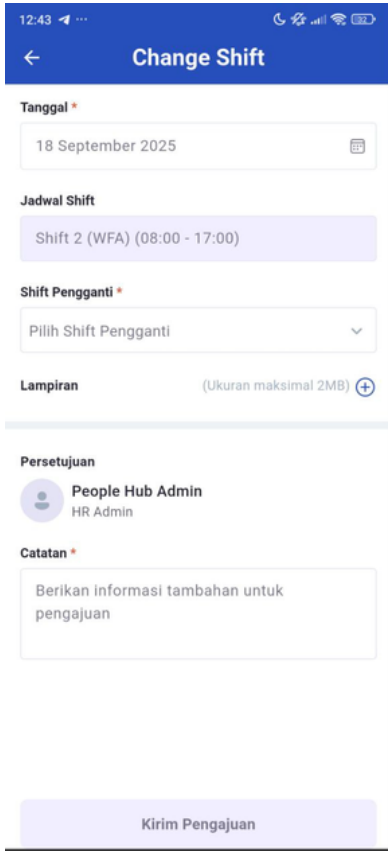

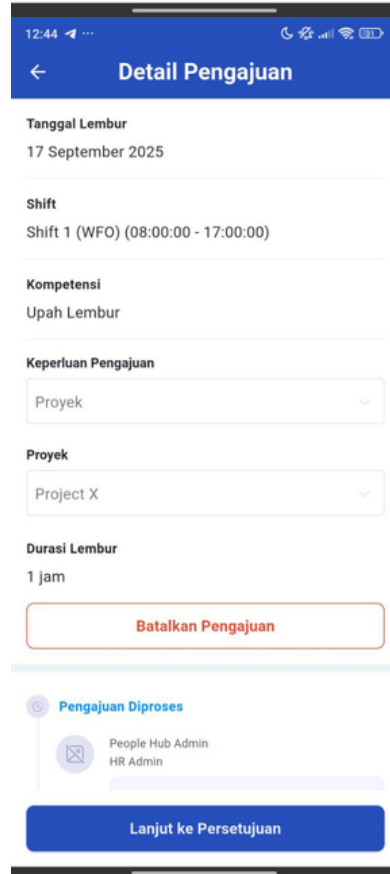

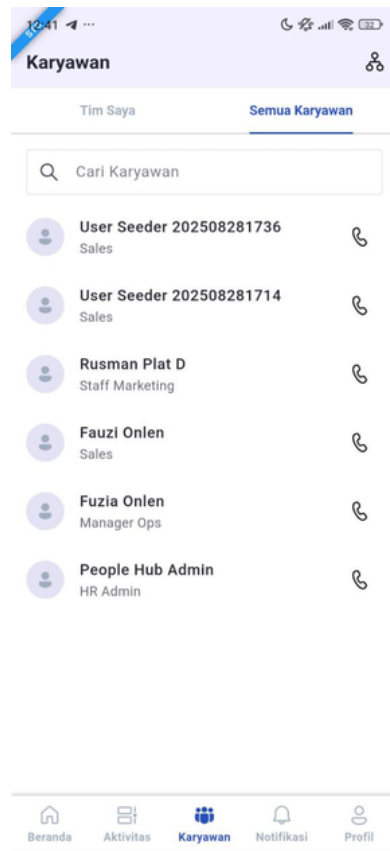

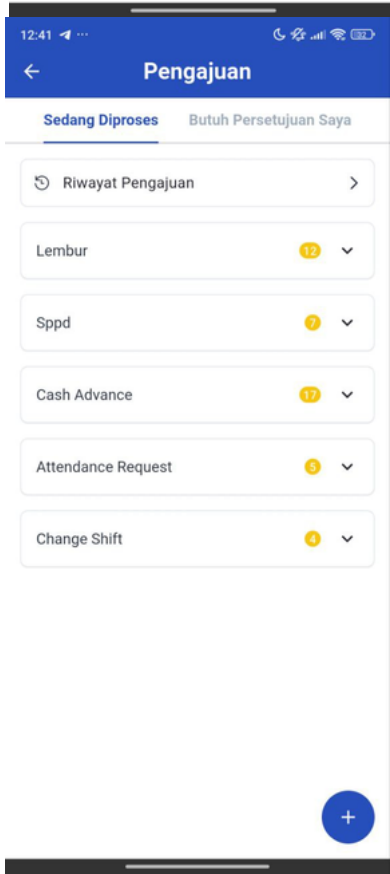

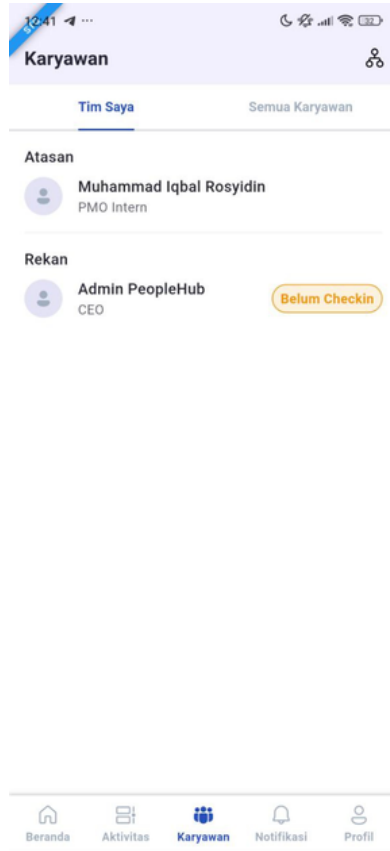

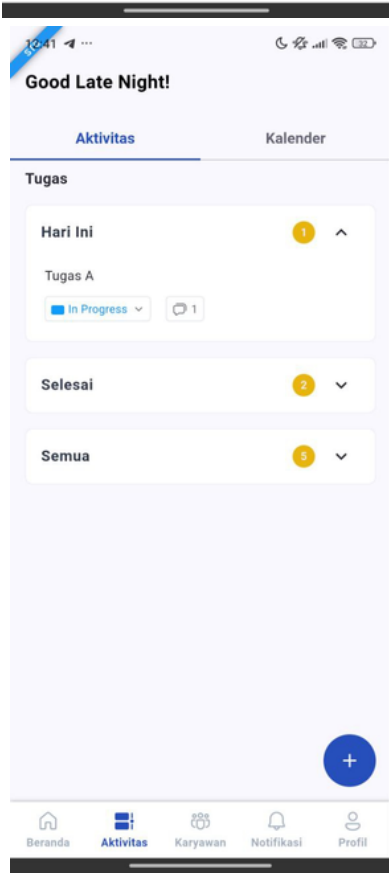

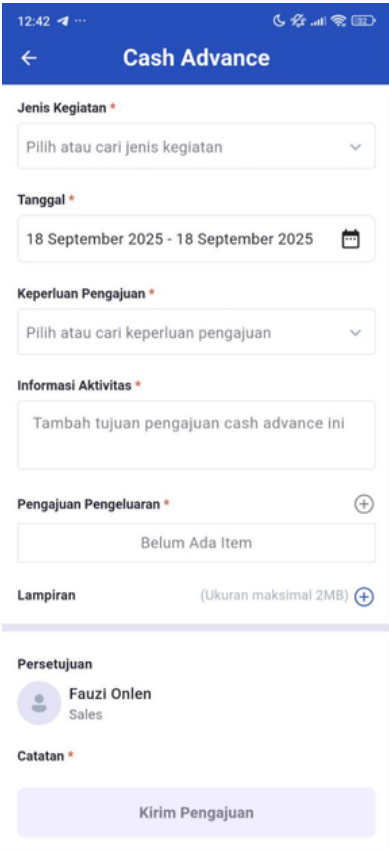

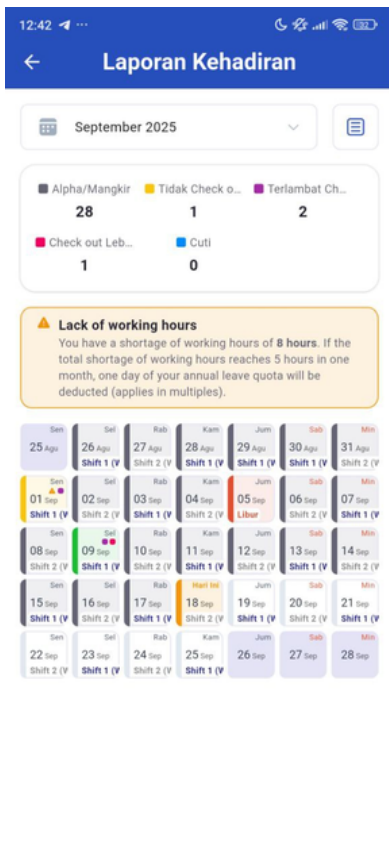

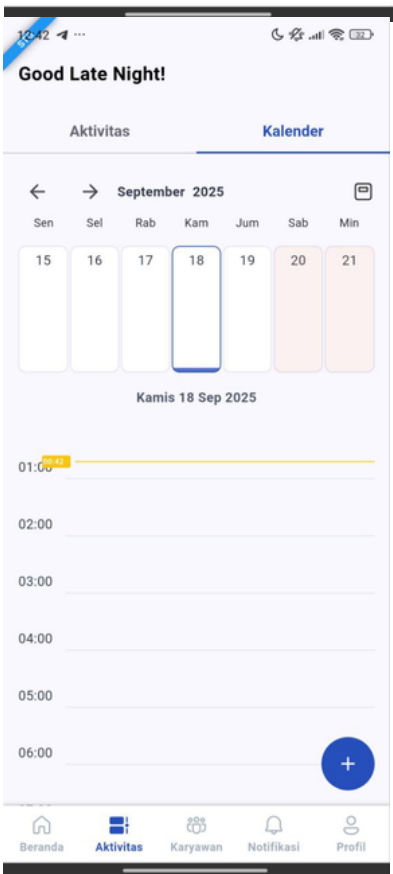

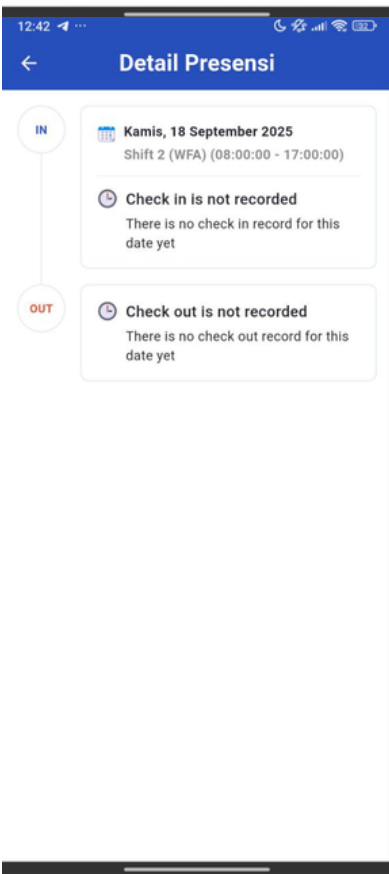

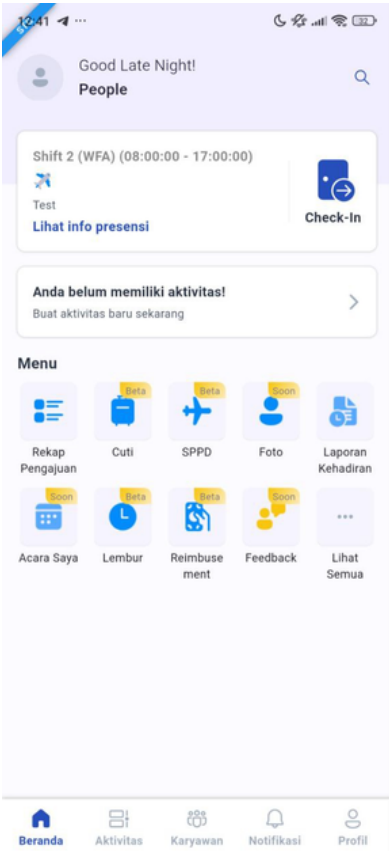

OptimosHr

OptimosHr is an HR platform designed to enhance employee engagement and streamline HR processes in organizations. The application offers a centralized hub for managing employee information, announcements, and collaboration tools, aiming to improve communication and operational efficiency within teams.

As a Mobile Developer for OptimosHr, my contributions included:

- **Feature Development:** Built key features such as employee profiles, internal announcements, and a team collaboration dashboard using Flutter.
- **Data Integration:** Integrated the app with backend systems to fetch and synchronize employee data, ensuring real-time updates and data consistency.
- **Custom Widget Design:** Developed reusable custom widgets to maintain a consistent UI/UX across different sections of the app.
- **Optimization and Debugging:** Improved app performance by identifying and fixing issues related to data fetching, rendering delays, and user interface glitches.
- **Collaboration:** Worked closely with the HR team to understand user requirements and translate them into functional features, ensuring alignment with organizational needs.

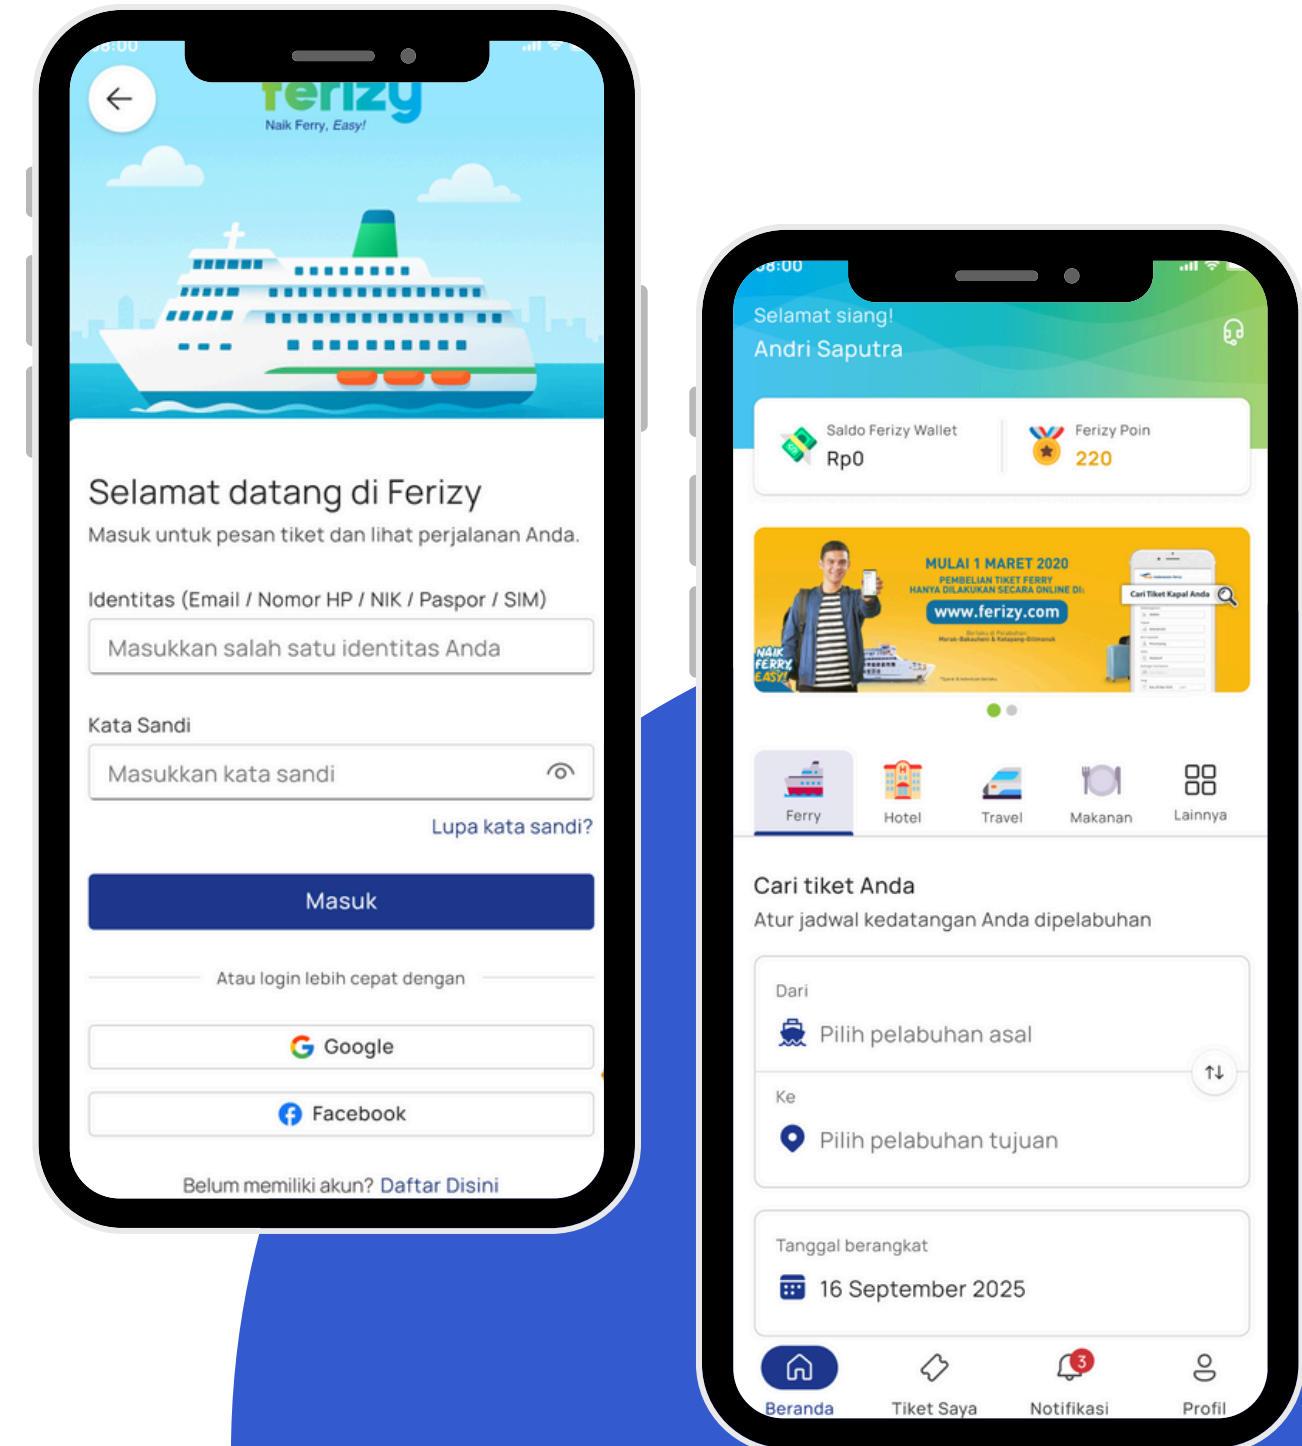

Ferizy

As a Flutter Developer, I was responsible for a complete revamp of the Ferizy mobile application, a platform that allows users to seamlessly book ferry tickets directly from their smartphones.

- Modernized UI/UX: Redesigned and implemented a clean, user-friendly interface to improve the overall booking experience.
- Cross-Platform Development: Built with Flutter to ensure smooth performance and consistent design across both iOS and Android.
- Feature Enhancements: Optimized core features including ticket reservation, schedule browsing, and payment integration.
- Performance Improvements: Refactored legacy code for better maintainability, faster load times, and reduced app crashes.
- App Store Delivery: Ensured the application met App Store requirements and provided a polished final product for end users.

This project required balancing scalability, performance, and usability, while maintaining alignment with business needs and user expectations.

Selamat datang di Ferizy!

EazyTask

EazyTask is an innovative and user-friendly task management application. It's designed to help users organize their daily work and tasks more efficiently, both individually and in a team. EazyTask offers a clean and intuitive interface, allowing users to easily create task lists, set deadlines, and track their progress.

As a front-end developer, I was fully responsible for slicing the UI from Figma into code, ensuring every design detail was implemented perfectly. I also played a key role in integrating APIs to ensure the application could communicate efficiently with the back-end.

Furthermore, I implemented an offline feature that allows users to access and manage their tasks even without an internet connection. I also redesigned several parts of the interface to enhance the user experience (UX), making the app feel more modern and easier to navigate. This redesign included improvements to the layout, color palette, and interactive elements, making EazyTask not only functional but also aesthetically pleasing.

EazyTask Kiosk

EazyTask Kiosk is a dedicated companion app to the EazyTask ecosystem, designed for end-users to easily manage attendance, task tracking, and daily activities. With a focus on simplicity and efficiency, it ensures users can seamlessly interact with the system whether online or offline.

As a Flutter Developer, I was responsible for revamping the entire application to deliver a smoother and more modern user experience. My contributions included:

- **UI Implementation:** Converted Figma designs into responsive Flutter code, ensuring pixel-perfect accuracy across devices.
- **API Integration:** Connected the front-end with back-end services for real-time synchronization of attendance, tasks, and reports.
- **Offline Capability:** Developed offline features so users could still log activities and sync them once back online.
- **UX Enhancements:** Redesigned core flows and visual elements, improving navigation, layouts, and interactive components to make the app more intuitive.
- **Performance Optimization:** Refactored legacy code to improve stability, reduce crashes, and enhance load times.

Through this project, I contributed to making EazyTask Kiosk not only reliable and functional but also user-friendly and visually appealing for everyday use.

QilifeScan

QiLifeScan is a FlutterFlow-based mobile application designed to provide users with insights through photo scanning and customized questionnaires. The app analyzes inputs and delivers personalized results, including recommended music tracks tailored to the scan outcome, creating a more holistic wellness experience.

As a FlutterFlow Developer, I was responsible for:

- Building the app's core flows (photo scan & questionnaire submission).
- Integrating logic to generate results dynamically based on user inputs.
- Implementing UI components to ensure a smooth and modern user experience.
- Connecting multimedia features such as music recommendations aligned with scan outcomes.

This project highlights my ability to leverage low-code tools (FlutterFlow) to deliver a functional, user-friendly, and engaging mobile app in the health and wellness domain.

Danone Scan App

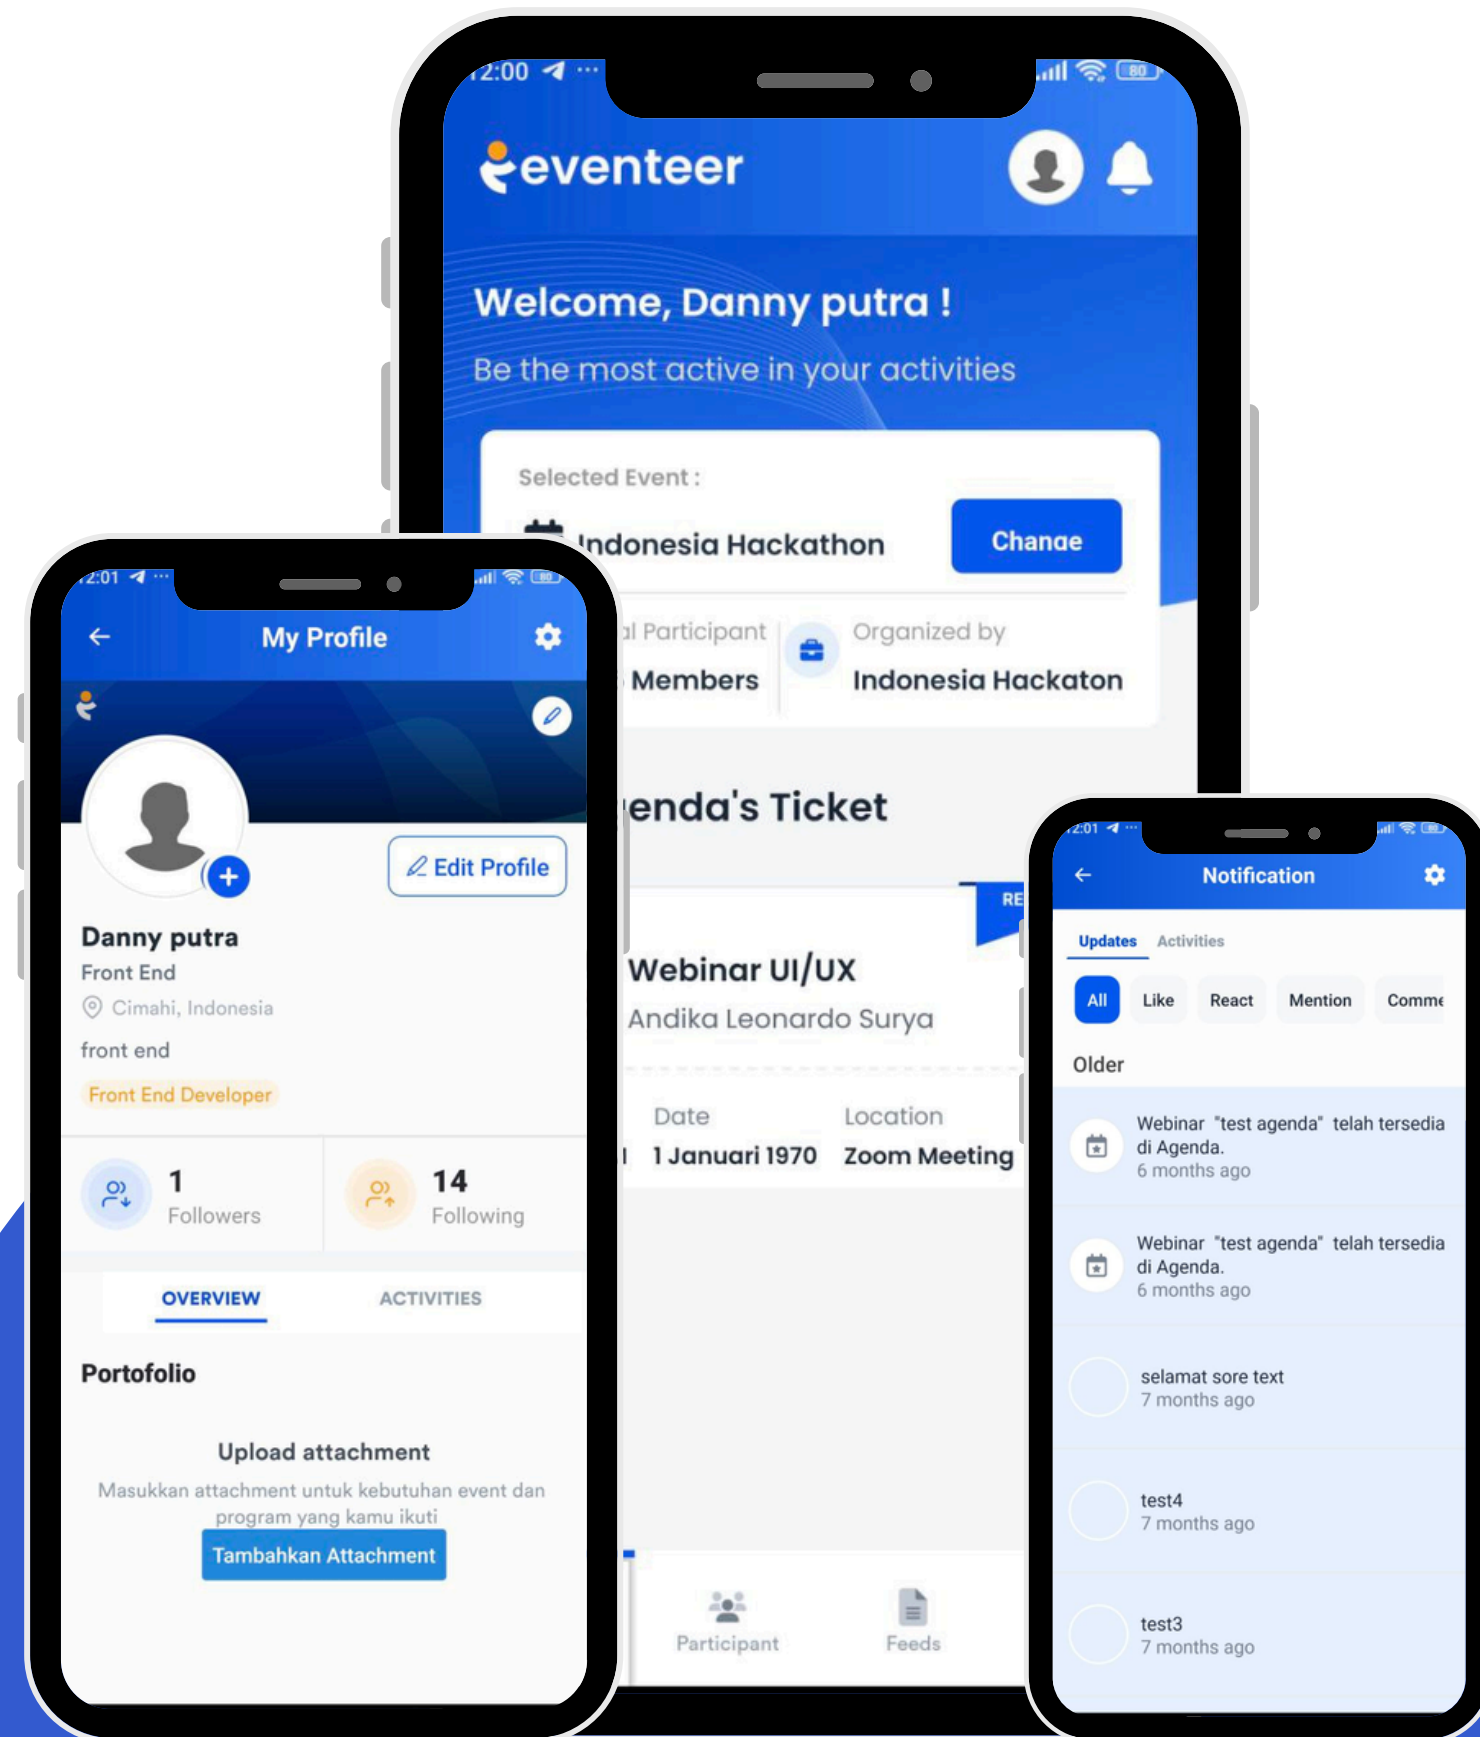

Smart Gallon Scanner is a mobile application built with Kotlin, designed to identify and validate water gallons based on unique tags or markers. Users can easily scan the gallon using their smartphone camera, and the app automatically detects the tag to verify authenticity, track usage, or record inventory.

As an Android Developer, my responsibilities included:

- Implementing the camera scanning feature with tag recognition.
- Building the front-end using Kotlin to ensure smooth performance and native Android experience.
- Integrating APIs for real-time data validation and inventory updates.
- Designing a simple and intuitive UI so users can complete scans quickly and accurately.

This project demonstrates my expertise in native Android development with Kotlin, focusing on computer vision, tag scanning, and usability for daily operational needs.

Eventeer

Eventeer is an event management application developed during my internship as part of the Merdeka Internship Program. The app is designed to simplify event organization by offering features such as event registration, notifications, and participant management. Eventeer is now available on the Play Store and has been well-received for its user-friendly interface and functionality.

As a Mobile Developer for Eventeer, my contributions included:

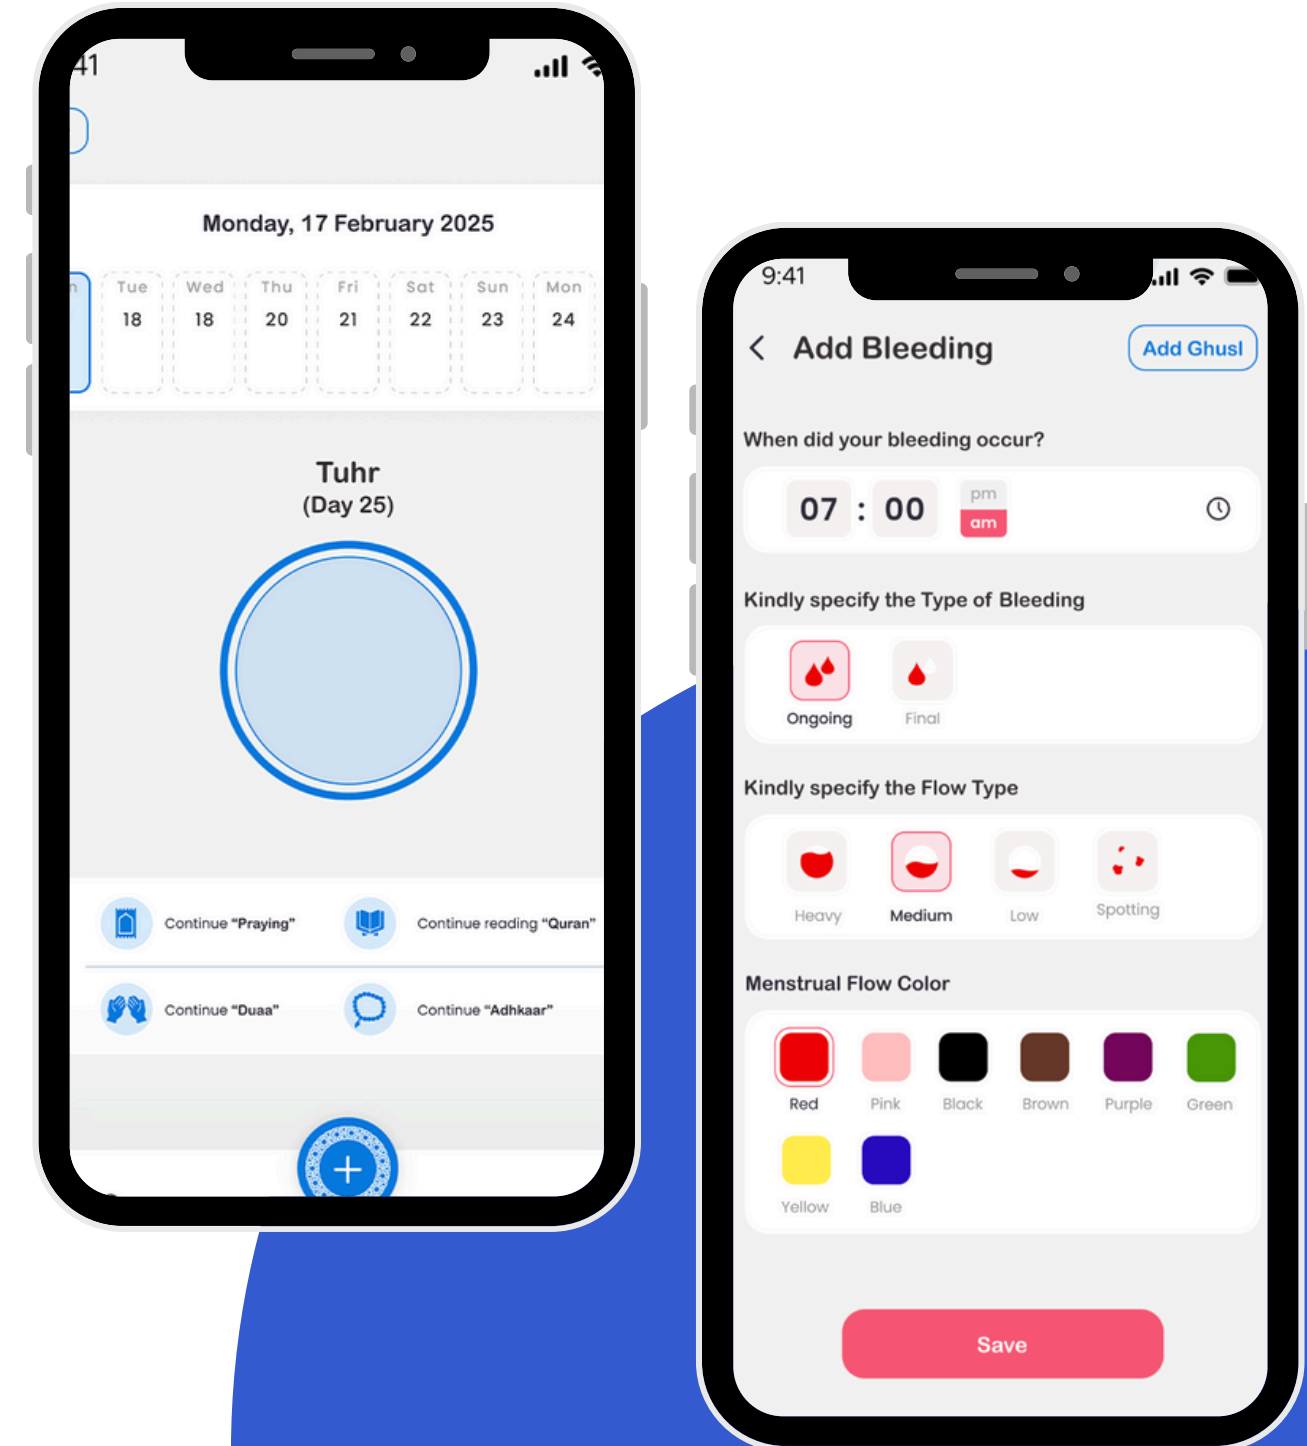

- **Feature Development:** Designed and implemented key features such as event registration, real-time notifications, and participant management using React Native.
- **UI/UX Improvements:** Worked on creating an intuitive and visually appealing user interface to enhance user engagement and ensure seamless navigation.
- **API Integration:** Integrated APIs to support features like event data fetching, user authentication, and push notifications.
- **Performance Optimization:** Ensured the app was lightweight and responsive by optimizing code and reducing unnecessary overhead.
- **Collaboration:** Collaborated closely with mentors and team members to align the app's functionality with user needs and project goals.

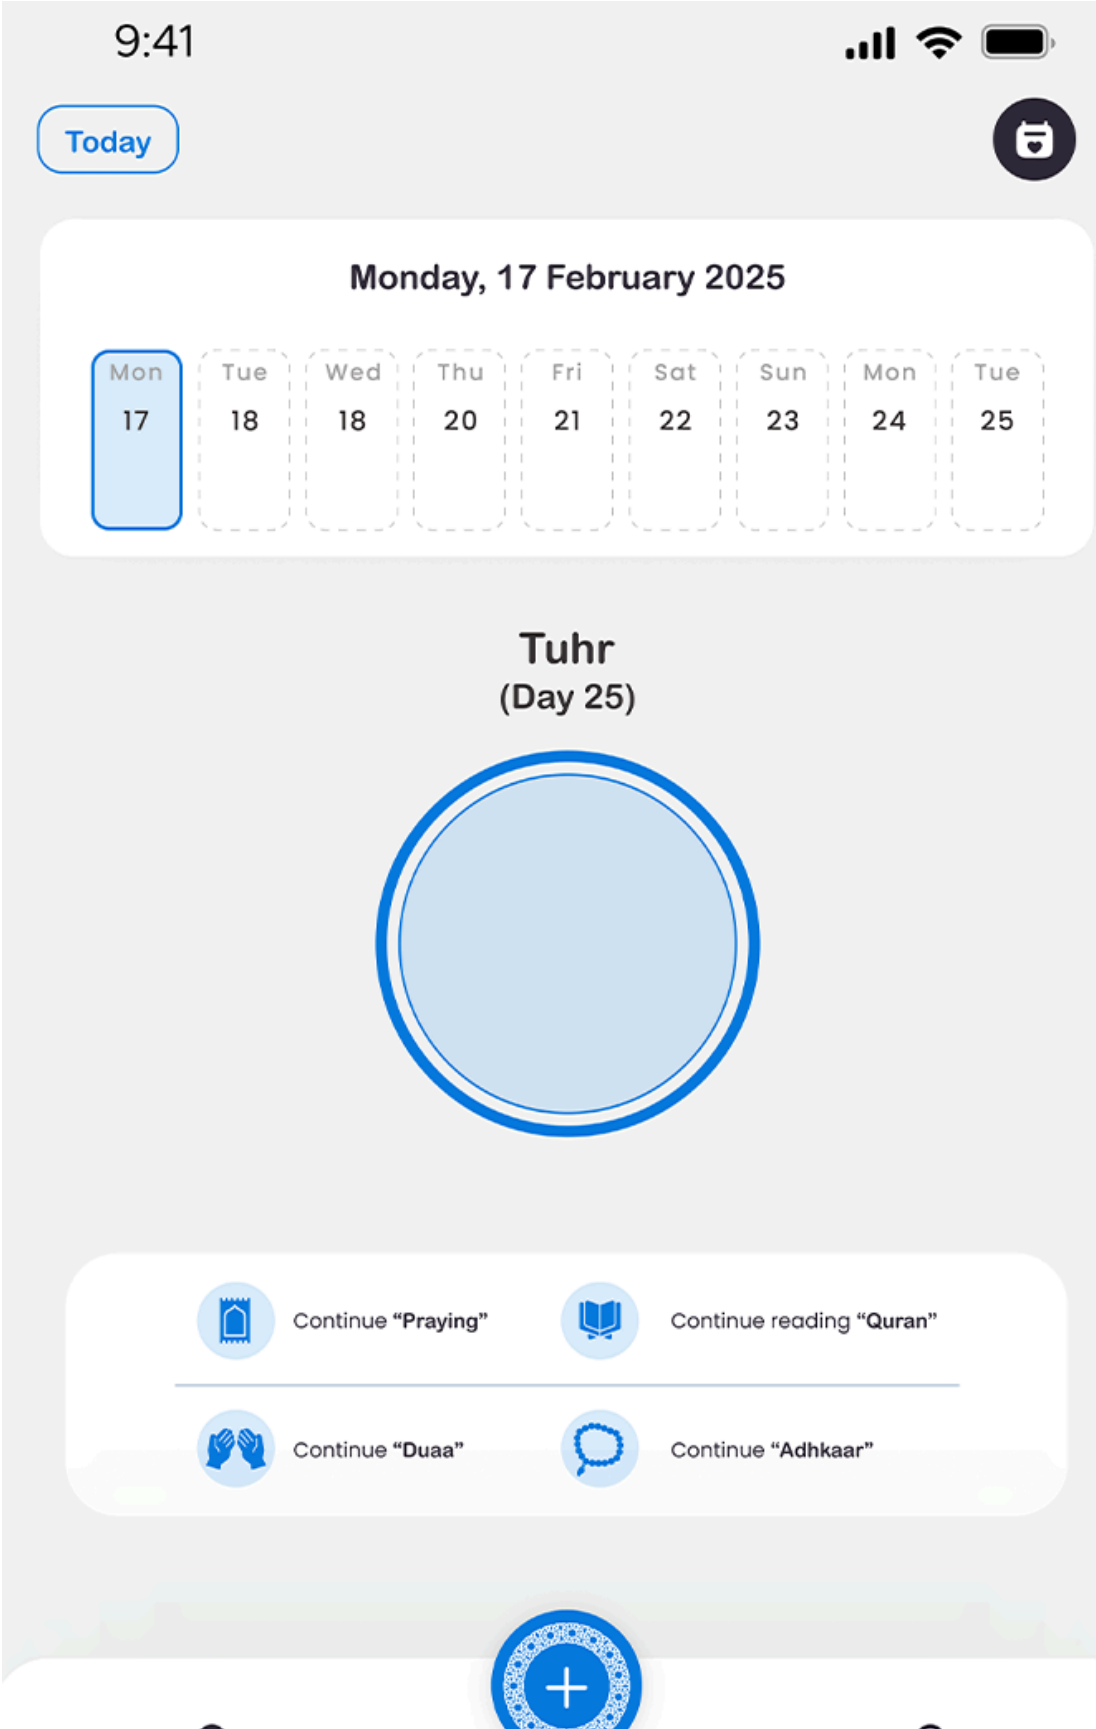

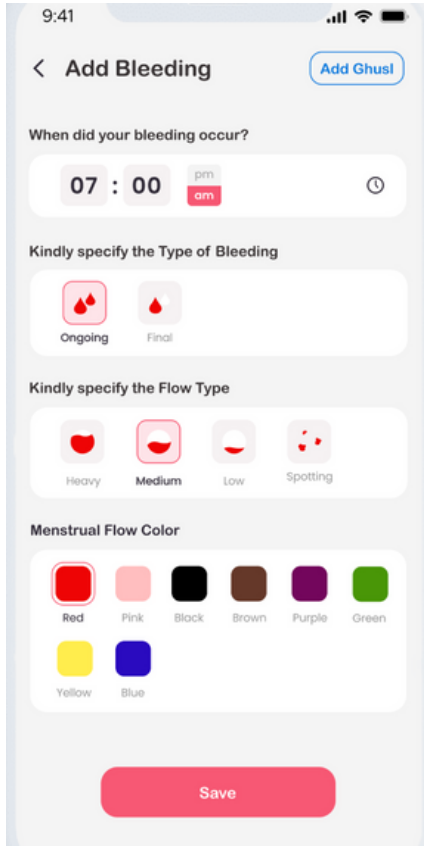

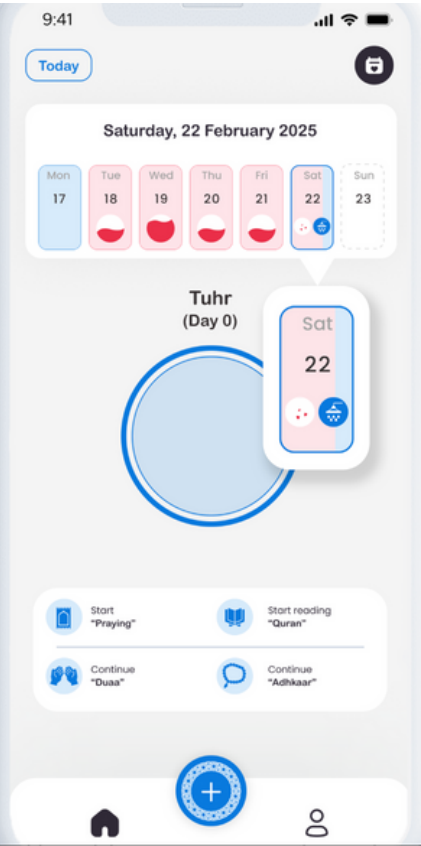

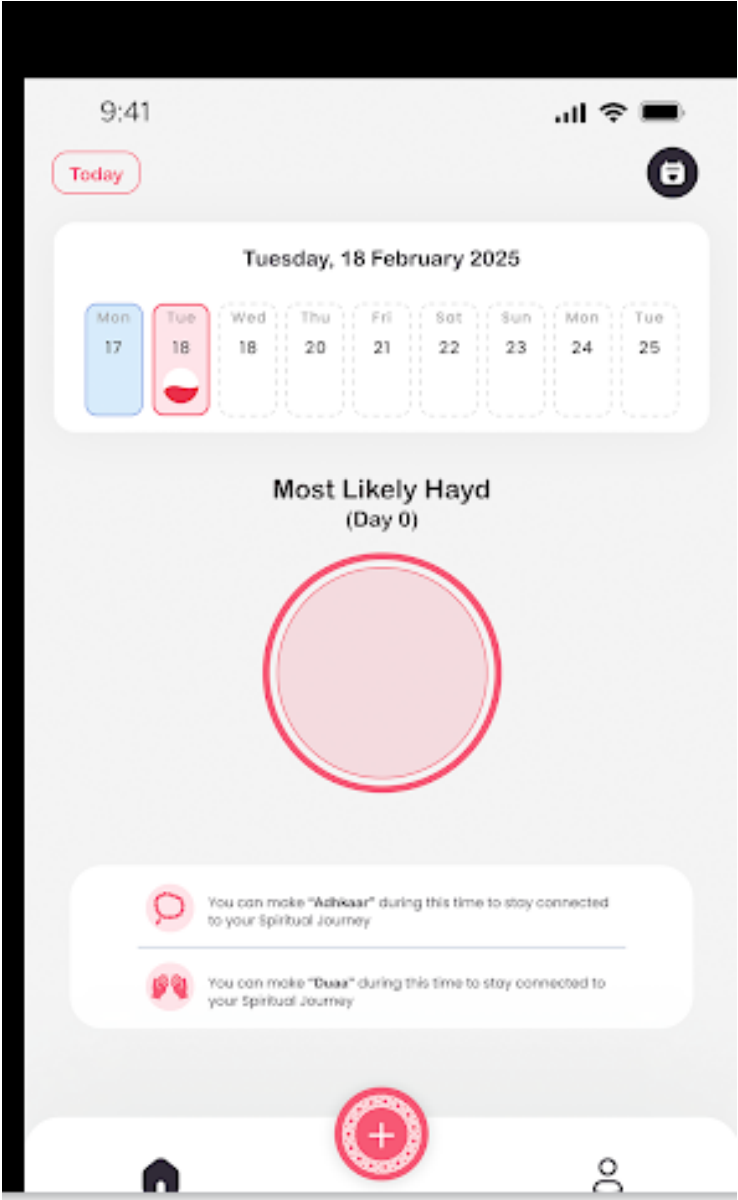

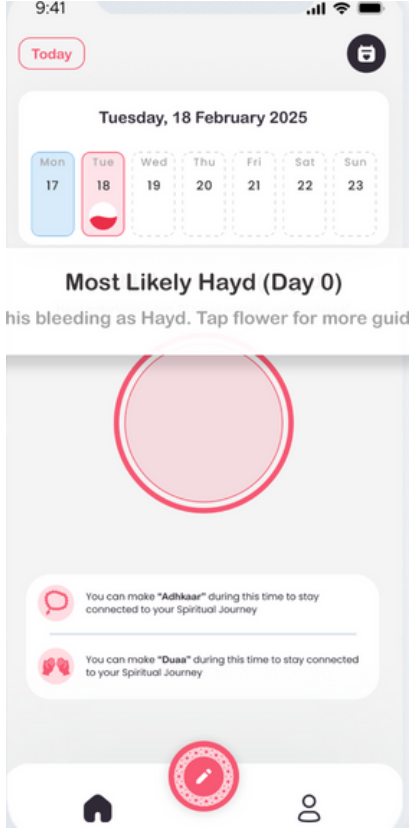

My Hayd app

My Haayd App is a mobile application built with React Native, designed to provide a smooth and user-friendly experience for its target audience.

As a Mobile Developer for My Haayd App, my contributions included:

- **UI Slicing & Implementation:** Translated Figma designs into pixel-perfect React Native components, ensuring consistent layouts and styling across iOS and Android.
- **Reusable Components:** Developed modular and reusable UI elements to speed up development and maintain design consistency.
- **Responsive Design:** Optimized layouts for different screen sizes and devices, delivering a seamless cross-platform experience.
- **Collaboration:** Worked closely with designers to refine details and ensure accurate execution of the visual design.
- **Performance Awareness:** Focused on lightweight and efficient implementation to maintain smooth navigation and fast rendering.

Services

Mobile App Development

- Design and development of cross-platform mobile applications using Flutter, ensuring a consistent experience across Android and iOS.
- Native app development using Swift (iOS) and Kotlin (Android) for platform-specific needs.

UI/UX Design Implementation

- Translating design prototypes into responsive and interactive mobile applications.
- Ensuring seamless user experience with attention to detail in animations, layouts, and navigation flows.

Consultation and Prototyping

- Offering consultations to define app requirements and providing prototypes to visualize app functionality before development.

Integration with Third-Party Services

- Integrating third-party services such as payment gateways, social media logins, or cloud storage solutions.

API Integration

- Implementing secure and efficient API integrations to connect mobile applications with backend services.
- Real-time data synchronization for features like live notifications, data fetching, and user authentication.

Bug Fixing and Maintenance

- Troubleshooting and resolving application issues to ensure smooth functionality.
- Providing ongoing app updates and maintenance to keep applications up-to-date with the latest OS versions and features

Performance Optimization

- Identifying and fixing performance bottlenecks to enhance app responsiveness and stability.
- Optimizing app loading times and minimizing resource usage for better user experience.

Custom Feature Development

- Developing tailored features like task management, attendance tracking, or e-commerce modules to meet specific client needs.
